Overview

In **SAP Build Process Automation (SBPA)**, *Actions* allow you to connect your workflow processes with external systems (such as SAP S/4HANA, SAP BTP ABAP Platform, or Ariba) to perform operations like GET, POST, or PATCH calls.

In this tutorial, you will create an Action Project based on an Open API specification and integrate a callback notification into your travel approval workflow.

Step 1: Create an Action Project

1. Open the **SAP Build Lobby**. Under **Connectors**, select **Actions**.
2. Choose **Create > Upload API Specification**.
3. Upload your Open API specification file and click **Next**.
4. In the *Create an Action Project* popup:
 - **Project Name:** Workflow Notification
 - **Description:** Workflow Completion Notification
 - Click **Create**.
5. Once created, SAP Build Actions will open. Select the **Post** service operation and click **Add**.

Step 2: Add Action to the Business Process

1. Navigate to your project (e.g., RAP110_Travel_Workflow) and open the process Travel Approval Processing.
2. Click the expand arrow (>) on the **Approval form** step to see the branches.
3. Click **+** on the **Approve** branch and select **Action**.

4. In the *Browse Action library* popup, search for **Workflow Notification**, select it, and click **Add**.

Step 3: Configure the Action

1. Click on the added Action to open configuration.
2. **Destination Configuration:**
 - In the **General** tab, expand the **Destination variable** section.
 - Choose **+ Create Destination Variable**.
 - Set **Identifier:** `CallBack_Destination` and **Description:** `CallBack Destination`. Click **Create**.
3. **Input Mapping:**
 - Click the **Inputs** tab.
 - Map `WorkflowInstanceId` to **Process Instance ID** (under Process Metadata).
4. **Configure Reject Branch:**
 - Click **+** on the **Reject** branch and repeat the steps to add the **Workflow Notification** action.
 - Ensure you select the `CallBack_Destination` variable created previously.
 - In the **Inputs** tab, map `Outcome` to the **Comment** field from the Approval Form (to signal the rejection), and `WorkflowInstanceId` to the **Process Instance ID**.
5. Click **Save** to finalize the business process.
