Overview

Tasks are an integral part of any business process. **SAP Build Process Automation (SBPA)** enables you to build interactive forms that are routed to business users in their inbox (via **My Inbox**) to take decisions such as approving or rejecting requests (e.g. sales orders, travel requests, invoices).

In this tutorial, you will design a no-code approval form using the embedded Form Builder and configure its parameters within the workflow process canvas.

Prerequisites

- You have created a Business Project and Process in SBPA.
- You have configured a Process Trigger and Data Type as outlined in the previous tutorial step.

Step 1: Create and Design the Approval Form

1. Go to the process `Travel Approval Processing` and choose **+** below the Trigger.
2. Select **Approval** > **Blank Approval**.
3. In the *Create Approval* dialog box, specify:
 - **Name:** `Approval Form`
 - **Description:** `Form to approve or reject Travel`
4. Click **Create**, then choose **Open Editor** of the Approval Form.
5. Design the layout by dragging and dropping layout components:

Form Field / Control	Field Setting / Content Label
Headline 1	Travel Approval
Paragraph	A new travel request has been received. Please review and confirm whether it can be fulfilled or not.

Form Field / Control	Field Setting / Content Label
Paragraph	Travel Details:

6. Add read-only Input Fields for context sent from the external system (check the **Read Only** box for each):

Form Field	Label	Setting
Text	Travel ID	Read Only
Text	Agency Name	Read Only
Text	Booking Fees	Read Only
Text	Currency Code	Read Only
Text	Customer Name	Read Only
Text	Total Price	Read Only

7. Add interactive input fields for approver input:

Form Field	Label	Setting
Text	Comment	Check Required

8. Click **Save** to save the form.

Step 2: Configure the Approval Form in the Process Flow

1. Return to the process canvas **Travel Approval Processing** and select the **Approval Form** step.

2. General Information Section:

Field	Configuration / Value
Subject	Review and approve travel Travel id [Travel ID] for customer [Customer Name] (Combine static text with dynamic Process Content variables)
Description	Travel Approval
Priority	High

3. Recipient Configuration:

- In the **Users** field, bind `Process Started By` (from Process Metadata) or enter comma-separated email addresses (e.g. abc.xyz@sap.com).

4. Due Date Section:

- **Type:** Select `Static Duration`.
- **Duration:** Set to `2 Days` (marks tasks as overdue in My Inbox if not acted upon within 2 days).

5. Inputs Mapping Section: Map each read-only form input parameter to the corresponding Process Content field:

Form Input Field	Process Content Entry
Travel ID	Travel ID
Agency Name	Agency Name
Booking Fees	Booking Fees
Currency Code	Currency Code
Customer Name	Customer Name
Total Price	Total Price

6. Click **Save** on the top bar to save all process updates.

Test Yourself / Quick Quiz

Q: Can you combine plain text and process content attributes in the subject of a form?

- ☒ **Yes, of course.** (e.g., combining plain text with dynamic fields like *Travel ID* and *Customer Name*).
- ☐ No, that is not possible.
